APPLICATIONS

1. Convert the Suppliers portal into an applications portal. This portal services all interactions with the government for other issues.
2. Users can register under any of the above to start using the services
3. The following modules will appear under applications:

GOVERNMENT SERVICES. Processing applications for government services. fill the registration form similar to the vendor portal registration form. Then apply for the specific services needed. For example, licensing, etc building permits etc Users can track progress and see how far and which office is holding the application and how many more stages to completion. User can chat with admin. Alerts, notifications, request for more information, flag incomplete submissions, refuse to accept incomplete submissions, users can save and continue later or submit later. Etc

EMPLOYMENT SERVICES, Processing recruitment, training, posting to work stations, transfer requests, for all government workers. Fill the registration form similar to the vendor portal registration form but customized to recruitment services, user then creates a profile and apply for new posts or apply for promotions. (convert a vendor portal to job portal for processing job applications, create forms that match international standards), ai assistant for assessing applications and shortlisting them. Users can track progress and see how far. Users

can track progress and see how far and which office is holding the application and how many more stages to completion. User can chat with admin. Alerts, notifications, request for more information, flag incomplete submissions, refuse to accept incomplete submissions, users can save and continue later or submit later. Etc

ANNUAL RETURNS- COMPANIES. Allows companies to file annual returns confirm if the information on their profile is still valid, add new documents if some have expired.
