E- Procurement

Ai Powered e-Government Procurement & Automated oversight Intelligence system (rename all the portals , pages, - final name- 8 July), no abbreviations

Rules

1. Tenders / rfq/ etc are created in the system before publishing to the bidders.
2. When creating the tenders one has to specify if it's an open bid or direct appointment or an unsolicited bid etc then select the class (works/supplies/services) then select the relevant PPADB codes which the bidders just possess to be able to bid for the project, then after all parameters are set the bid can be published to the bidders, the bidders view the listed bids from their portal inbox and pay to down load the tender (rfq are free) the rest you pay to download
3. The system automatically generates all the people who will be involved in the tender at evaluation stage (chooses the assessors with the following rights, initial assessor, authoriser, adjudicator, oversight appeal)
4. All published tenders /rfq etc have a start date and time and closing date and time with a digital vault to only unlock the submitted bids on closing date and time and only those authorized to access the bids will be able to open an access via 2FA. Automatically the listing reports are generated and published. However, to add another extra layer of security even after the bids are opened at the closing date all the assessors have to enter their passwords to unlock for the assessors to have access to each bidders file to review anything or to start working on the bid
5. Bidders receive notifications of the tenders/rfqs/etc according to their selected areas of interest (works/supplies/services) and the registered codes which the bidder possesses (refer to the PPADB codes document)
6. No user has authority to change anything in the bids. Any user who has made comments, recommendations, markings, have to be authorized by another person.
7. Other rules and specifications in the previous documents shared also apply, this is just to explain the logic and some of the rules

Registration stage

1. Allows the Registration or creation of all tenders/ rfq/ eoi/auctions/rfp- add filers for this report
2. Register listing- Show a list of all registered -tenders/ rfq/ eoi/auctions/rfp/ with for example tender code- tender description – tender location etc same for all the other rfq-etc, (click to view a drop down list of all the invited bidders and their status (expressed interest to participate or have bought the tender package) and further click the view bidder button of each bidder details)- add filers for this report
3. Goal is to register the tenders/ rfq/ eoi/auctions/rfp. This must be generated by the initiator and subject to approval
4. Attach compliance checklist form

E-Procurement	Registration	Tenders	Class: works, supplies, services	under tenders remember to class them: 1 Open bid 2 restricted 3 framework agreement 4 direct appointment * This applies at all registations	Complete the registration steps	Add the technical specifications requirements forms with the detailed tender specifications, add competence test exam
		Rfq	Class: works, supplies, services	1 Open bid 2 restricted 3 framework agreement 4 direct appointment * This applies at all registations	Complete the registration steps but Technical evaluation Not applicable so do not include the for technical evaluation	Add the specifications listings/ quantities required/ pictures / product details form… for rfq only because mostly these are supplies. No technical specifications
		Rfp	Class: works, supplies, services	1 Open bid 2 restricted 3 framework agreement 4 direct appointment * This applies at all registations	Complete the registration steps	Add the technical specifications requirements forms with the detailed tender specifications, add competence test exam
		Eoi	Class: works, supplies, services	1 Open bid 2 restricted 3 framework agreement 4 direct appointment * This applies at all registations	Complete the registration steps	Add the technical specifications requirements forms with the detailed tender specifications, add competence test exam
		Unsolicited bids	Class: works, supplies, services	1 Open bid 2 restricted 3 framework agreement 4 direct appointment * This applies at all registations	Complete the registration steps	Add the technical specifications requirements forms with the detailed tender specifications, add competence test exam
		Auctions	Class: works, supplies, services	1 Open bid 2 restricted 3 framework agreement 4 direct appointment * This applies at all registations	Complete the registration steps but Technical evaluation Not applicable so do not include the module for technical evaluation	Add the listing of the items to be auctioned, descriptions, specifications, pictures, packaging list, bid start value. No technical requirements

Evaluations stage

1. Allows the evaluation of all tenders/ rfq/ eoi/auctions/rfp- add filers for this report
2. Evaluation listing- Show a list of all tenders/ rfq/ eoi/auctions/rfp/ to be evaluated, with dates, stage in the process, (click to view a drop down list of all the participated bidders and their status (those who filed their bids within closing date) and further click the view details to access the bid (only those allowed access can open and view – password protected)
3. Bids are automatically evaluated by the ai assistant.

4. Evaluators only review the assessed bids and write a report if they wish to deviate from the ai assistant evaluation and then they can do their own manual assessment and allocate marks

E-Procurement	Evaluations	**Tenders**	**1 Compliance phase** System automatically assesses compliance and those non-compliant will be disqualified and notified and cannot proceed to technical bid assessment phase Show a list of the bidders and their status at this stage. The report must be a compliance certificate showing all bidders and the status… compliant/ disqualified	**2 Technical bid phase** System automatically evaluates bidder`s technical bids and awards marks. Technical bids are in 3 forms 1. System generated forms where a bidder completes the forms providing all technical details required and score the bidder as they mark these. This is the most preferred option and most accurate option than to rely on OCR of the attached documents, which may create a challenge if the bidder had attached documents that are too damaged to be recognized by OCR 2. Competence examination. Multiple choice questions. Bidder answers the questions and system automatically marks the test at the bid close date and score the bidder 3. Attached proposals. These are attached documents in PDF or word which have all the responses to the technical specifications requirements for the tender for example. The system will automatically mark these and score he bidder.	**3 Financial bid phase** The system automatically lists the bidders according to the cheapest and score the bidder Show a list of all the bidders and their score when the bid opens. Show this list per each tender or rfq or whatever according to their scores This is system generated.	**4 final score** The system automatically calculates the final score for all bidders and give the final result. The system should generate a report listing all the bidders with their total technical score and total financial score and the final score and the recommended winner

				Show a report showing all the bidders and their score 1. Score Marks for competency test per bidder 2. Score Marks for technical requirements per bidder 3. Score Marks for the proposals 4. Then total final score per each bidder		
		Rfq	**1 Compliance phase** System automatically assesses compliance and those non-compliant will be disqualified and notified and cannot proceed to technical bid assessment phase Show a list of the bidders and their status at this stage. The report must be a compliance certificate	2 Technical phase. Not applicable	**3 Financial bid phase** The system automatically lists the bidders according to the cheapest and score the bidder Show a list of all the bidders and their score when the bid opens. Show this list per each tender or rfq or whatever according to their scores	3 final score The system automatically calculates the final score for all bidders and give the final result. The system should generate a report listing all the bidders with their total

			showing all bidders and the status… compliant/ disqualified		This is system generated.	financial score and the recommended winner
		Rfp	**1 Compliance phase** System automatically assesses compliance and those non-compliant will be disqualified and notified and cannot proceed to technical bid assessment phase Show a list of the bidders and their status at this stage. The report must be a compliance certificate showing all bidders and the status… compliant/ disqualified	**2 Technical bid phase** System automatically evaluates bidder`s technical bids and awards marks. Technical bids are in 3 forms 4. System generated forms where a bidder completes the forms providing all technical details required and score the bidder as they mark these. This is the most preferred option and most accurate option than to rely on OCR of the attached documents, which may create a challenge if the bidder had attached documents that are too damaged to be recognized by OCR 5. Competence examination. Multiple choice questions. Bidder answers the questions and system automatically marks the test at the bid close date and score the bidder 6. Attached proposals. These are attached documents in PDF or word which have all the responses to the technical specifications requirements for the tender for example. The system will automatically	**3 Financial bid phase** The system automatically lists the bidders according to the cheapest and score the bidder Show a list of all the bidders and their score when the bid opens. Show this list per each tender or rfq or whatever according to their scores This is system generated.	3 final score The system automatically calculates the final score for all bidders and give the final result. The system should generate a report listing all the bidders with their total technical score and total financial score and the final score and the recommended winner

				mark these and score he bidder. Show a report showing all the bidders and their score 5. Score Marks for competency test per bidder 6. Score Marks for technical requirements per bidder 7. Score Marks for the proposals 8. Then total final score per each bidder		
		Eoi	**1 Compliance phase** System automatically assesses compliance and those non-compliant will be disqualified and notified and cannot proceed to technical bid assessment phase Show a list of the bidders and their status at this stage. The report must be a compliance certificate showing all bidders and the status… compliant/ disqualified	**2 Technical bid phase** System automatically evaluates bidder`s technical bids and awards marks. Technical bids are in 3 forms 7. System generated forms where a bidder completes the forms providing all technical details required and score the bidder as they mark these. This is the most preferred option and most accurate option than to rely on OCR of the attached documents, which may create a challenge if the bidder had attached documents that are too damaged to be recognized by OCR 8. Competence examination. Multiple choice questions. Technical bids are in 3 forms 10. System generated forms where a bidder completes the forms providing all technical details required and score the bidder as they mark these. This is the most preferred option and most accurate option than to rely on OCR of the attached documents, which may create a challenge if the bidder had attached documents that are too	**3 Financial bid phase** The system automatically lists the bidders according to the cheapest and score the bidder Show a list of all the bidders and their score when the bid opens. Show this list per each tender or rfq or whatever according to their scores This is system generated.	3 final score The system automatically calculates the final score for all bidders and give the final result. The system should generate a report listing all the bidders with their total technical score and total financial score and the final score and the recommended winner

				damaged to be recognized by OCR 11. Competence examination. Multiple choice questions. Bidder answers the questions and system automatically marks the test at the bid close date and score the bidder 12. Attached proposals. These are attached documents in PDF or word which have all the responses to the technical - specifications requirements for the tender for example. The system will automatically mark these and score he bidder. Show a report showing all the bidders and their score 13. Score Marks for competency test per bidder 14. Score Marks for technical requirements per bidder 15. Score Marks for the proposals 16. Then total final score per each bidder		
		Auctions	**1 Compliance phase** System automatically assesses compliance and those non-compliant will be disqualified and notified and cannot proceed to technical bid assessment phase	**Technical evaluations** Not applicable	**3 Financial bid phase** The system automatically lists the bidders according to the cheapest and score the bidder Show a list of all the bidders and their score when the bid opens.	3 final score The system automatically calculates the final score for all bidders and give the final result. The system should generate a report

			Show a list of the bidders and their status at this stage. The report must be a compliance certificate showing all bidders and the status… compliant/ disqualified		Show this list per each tender or rfq or whatever according to their scores This is system generated.	listing all the bidders with their total technical score and total financial score and the final score and the recommended winner

Cooling off

1. Objective is to allows the evaluators to verify agreement to the ai assistant evaluations. If the evaluator decides not to agree with the scores generated by ai assistant, then they can mark the technical evaluation manually and score the bidder manually and submit their separately marked technical evaluation score plus a justification report and submit in the system as an appeal. Once this is done, an adjudicator who is independent, will consider the manual marked sheet together with the ai assistant marked sheet and the justifications made and make a ruling. If the assessor is not happy with the adjudicators ruling, they can appeal to the oversight committee who will further assess and make a ruling
2. At this stage bidder may also launch an appeal where irregularities were reported or any complaints were registered.

Award

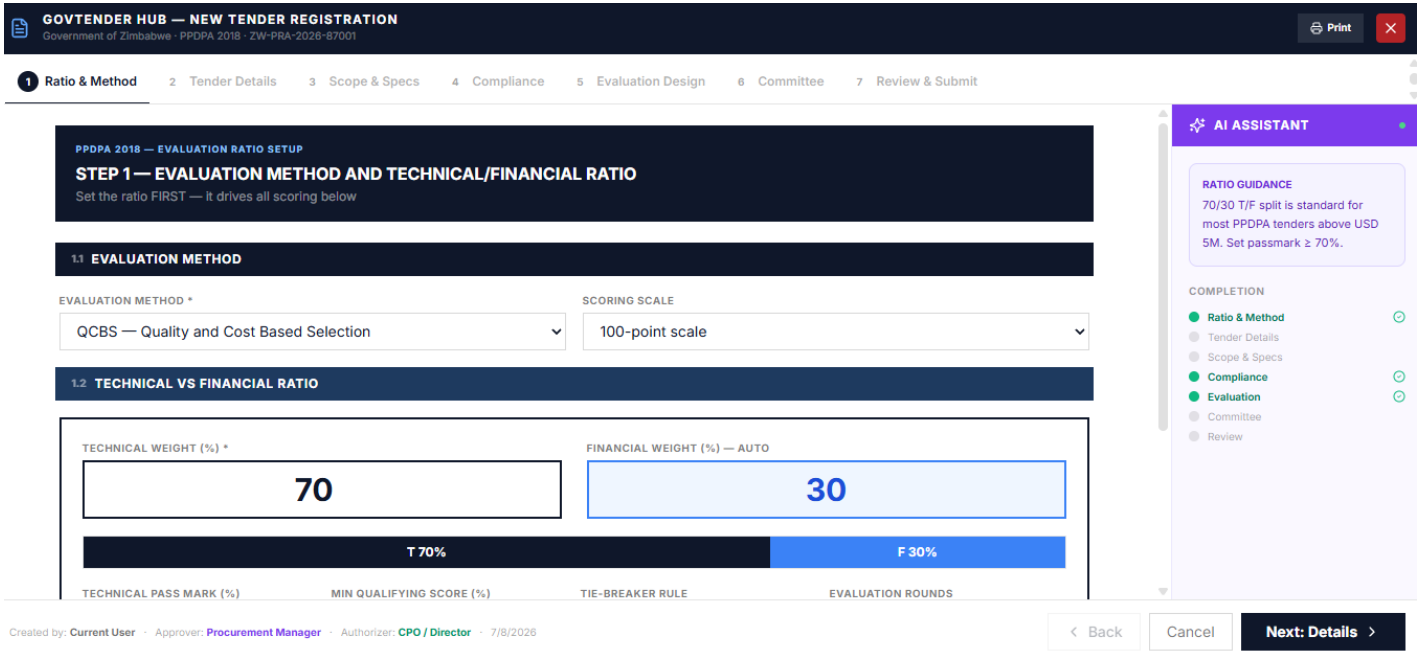

1. The system generates a list of the awarded tenders / rfqs / with the bidder scores with a view link to access all the files and information (compliance / technical/ financial – drill down)
2. The system generates award letters correspondence, letters to unsuccessful bidders with a note on the areas they should improve next time

Contracts

1. The system generates contracts that align with the specifications in the tender document or the scope of works/ supplies / or services
2. Contracts, offer letters, award letters, service level agreements, implementation plan, milestone payment plan requirements

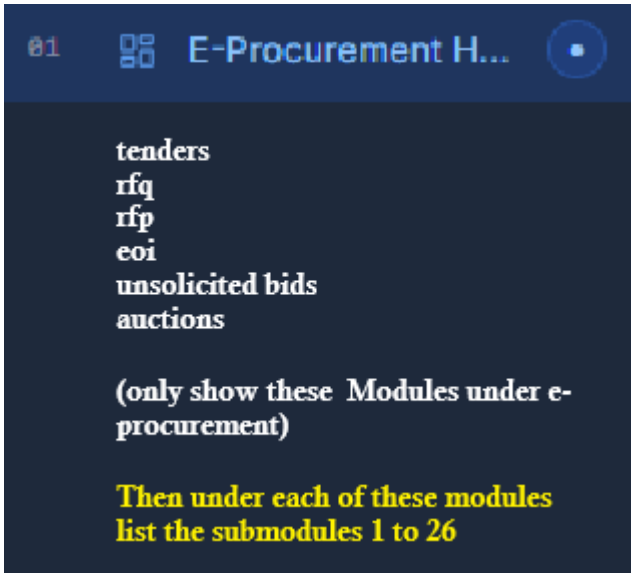

Implementation

1. System generates an implementation monitoring and reporting tracker
2. All stages are monitored from each milestone to all the way to payment of the vendor

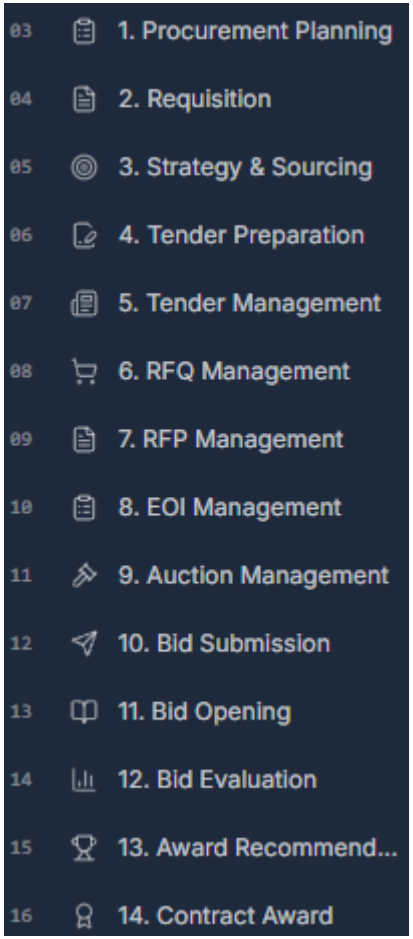

This format and design is impressive

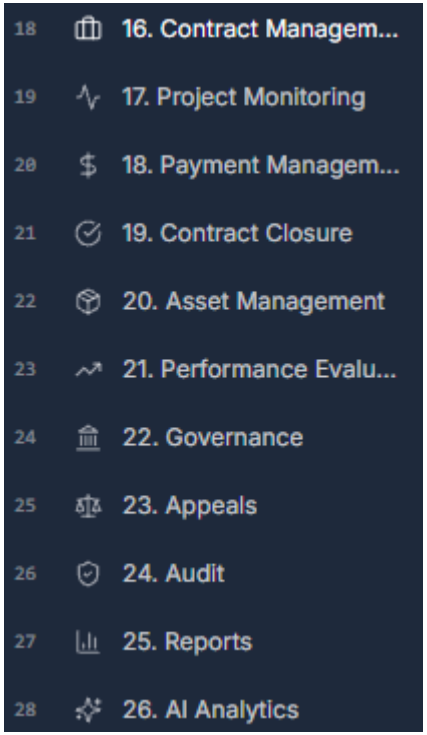

E-Procurement (re arrange the Modules)

Requirements

1. Under each of the above modules, list the below 26 sub modules
2. Under each submodule – for example under tenders, first list all the tenders with a view button to each tender and under the view button list all the bidders. Then show the work bench under each bidder. Under the work bench add a document viewer with all the listed documents of the bidder under evaluations. Document viewer can replace “documents” in the work bench.
3. Please feel free to ask me any questions and clarity or any concerns.
4. Lastly we need the best quality in this, no clutter, simple, clean logic. Each window must be big enough to allow the assessor to view the documents clearly. Don’t let the window overlap especially if there are folders and sub folders, hide the side bars if need be so that one can view the window clearly
